

BUSINESS WORKFLOW RUNBOOK

DOCUMENT REF: RUNBOOK-OPS-2026-11

STATUS: PRODUCTION MANUAL WORKFLOW

WORKFLOW TITLE: Customer Support Ticket Triage, SLA Priority Tagging & Escalation

BUSINESS UNIT: Global Customer Operations & Success

APPLICATION: ProfitPatterns AI Diagnostic Intake Sample

1. CONTEXT:

The support operations team receives 1,400+ weekly customer requests across web forms, email, and chat. Agents currently spend 28+ hours/week manually reading, tagging, and assigning urgency tiers for incoming inquiries.

2. CURRENT PROCESS STEPS:

1. Agent opens Zendesk Unassigned Queue.
2. Reads inquiry text and customer account tier Enterprise, Mid-Market, Standard.
3. Evaluates sentiment and urgency e.g. system downtime vs password reset.
4. Assigns tags: [Product_Area], [Issue_Type], [SLA_Tier], [Priority_Level].
5. For technical bugs, manually duplicates ticket details into Jira and pings on Slack.
6. For standard questions, copies canned response macros from Google Docs.

3. MEASURED INEFFICIENCIES:

- Median time to first human triage: 47 minutes during peak business hours.
- 12% of high-severity enterprise tickets are initially tagged with normal priority.
- Agents spend ~28 hours per week collectively performing repetitive categorization.

4. OBJECTIVES FOR PROFITPATTERNS AUDIT:

- Feasibility study for deploying an autonomous AI Triage Agent < 30s response.
 - Auto-draft contextual resolution replies for top recurring issues.
 - Projected payback timeframe: 3 months with 40% reduction in first-response time.
-
